

System testing & logging has never been easier or more affordable!

Hydrotechnik have developed a low cost digital pressure test kit with some powerful features. It is a rugged, hand held unit that comes ready to plug and play.

Complete kit
includes transducers, adaptors, cables, charger & software

analysis software supplied with kit (see over)

packed with features:

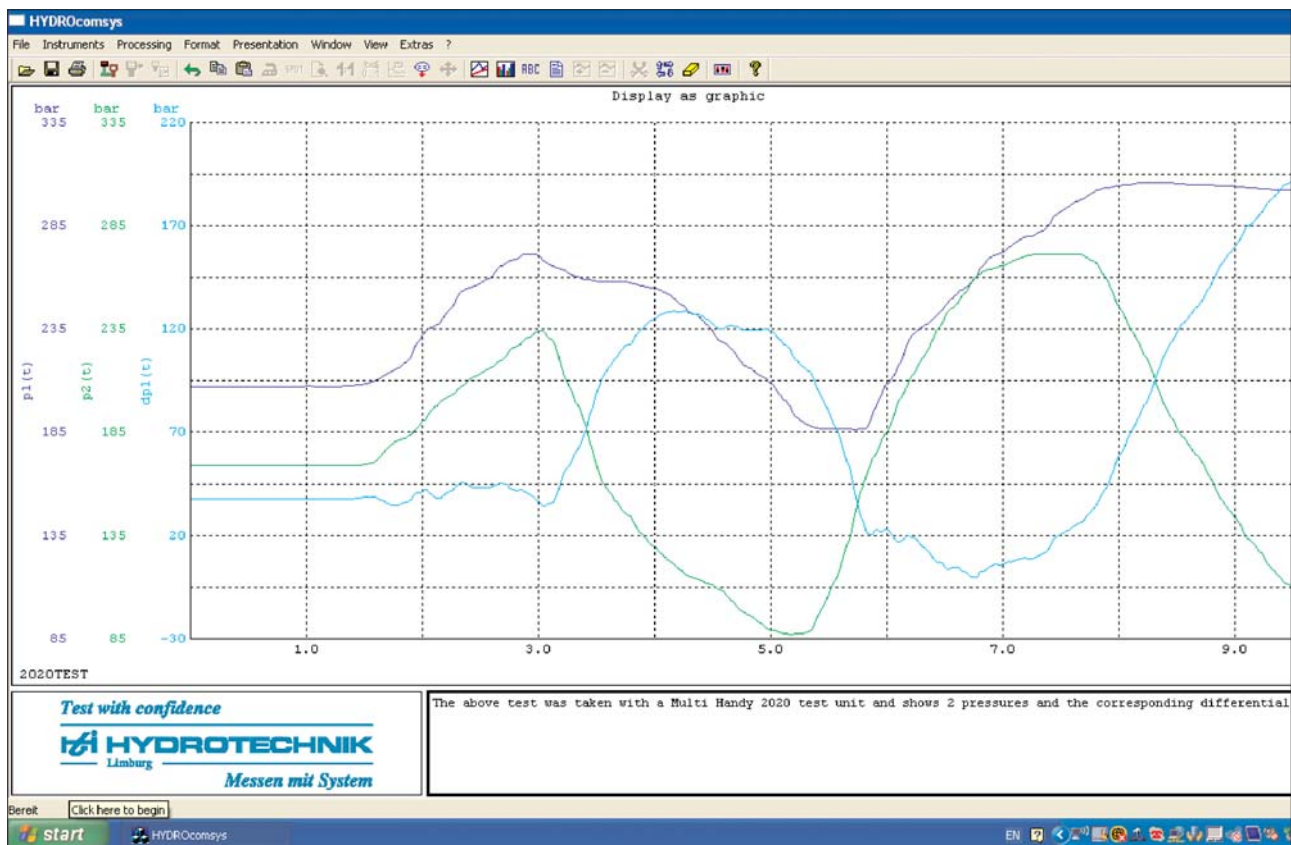

- Two pressure inputs
- 60,000 measuring value memory
- Min / Max capture on screen (1mS)
- Differential pressures
- Backlit LCD screen
- Memory feature to record data, 1 minute at 1mS
- Fast data transmission via USB
- Comes with analysis software
- Simple operation with only four keys
- Rugged plastic housing
- Rechargeable batteries for up to 6 hours continual use
- Available as measuring kit with 2 transducers

Measuring Kit	Pressure ranges	Order code
2020-pp-600-600	2x 0 to 600 bar	3160-18-18-69.00
2020-pp-400-400	2x 0 to 400 bar	3160-15-15-69.00
2020-pp-200-200	2x 0 to 200 bar	3160-10-10-69.00
2020-pp-60-600	1x 0 to 60 bar 1x 0 to 600 bar	3160-21-18-69.00
2020-pp-60-60	2x 0 to 60 bar	3160-21-21-69.00
2020-pp-6-60	1x -1 to 6 bar 1x 0 to 60 bar	3160-32-21-69.00

Hydrowin analysis software - included with the kit

All the instruments in our test range use the excellent Hydrocomsys system analysis software. This is a powerful, windows based programme, capable of advanced analysis of hydraulic system performance. Hydrowin Lite is downloadable from www.hydrotechnik.co.uk

Tests are taken using any of the Hydrotechnik hand held data logging units and the information is then transferred via USB connection to your laptop or PC. Once the tests are stored within the software, the results can be displayed in either tabular or graphical form. The software allows users to collaborate and swap files by disk or, more rapidly, by e-mail. This is particularly useful for relaying results between service or test engineers in the field and R&D and production departments back at base.

Upgrade from Hydrowin Lite to get the additional powerful features:

- > **Zoom** *Powerful zoom features to analyse key events*
- > **Spot values** *Pin point values at key events*
- > **Overlay** *Lay one test on top of another to compare results*
- > **Report** *Export results to other programmes such as Word or Excel to create reports for warranty claims etc.*
